Abstract (Basic): DE 3615358 A

The method is for applying substances to the skin, even to relatively inaccessible parts of the body, and for massaging them in. The substance is contained in a receptacle to which is attached a curved transition-piece. The receptacle may in the form of a plastics bottle or tube containing cream, ointment, lotion oil, tincture and so on.

The transition piece may form part of the receptacle and have at the other end, a sponge applicator, or a sieve through which the substance passes. By pressing the receptacle, the substance is emitted.

USE/ADVANTAGE - The applicator pumps substances onto the body without the hands coming into contact with the substances.
